REDUCE MICROBIAL RISK PhaseOne Gets It Done

1 HIGHEST AVAILABLE CONTENT OF HYPOCHLOROUS ACID

Unlike other HOCl that are commonly manufactured through electrolysis, PhaseOne is manufactured through a unique proprietary process that mitigates impurities and yields the highest available content of pure HOCl with an optimal pH for powerful efficacy.

Analyses charted on the right, were conducted by an independent lab for HOCl concentration upon opening of unexpired product. The results speak for themselves.¹

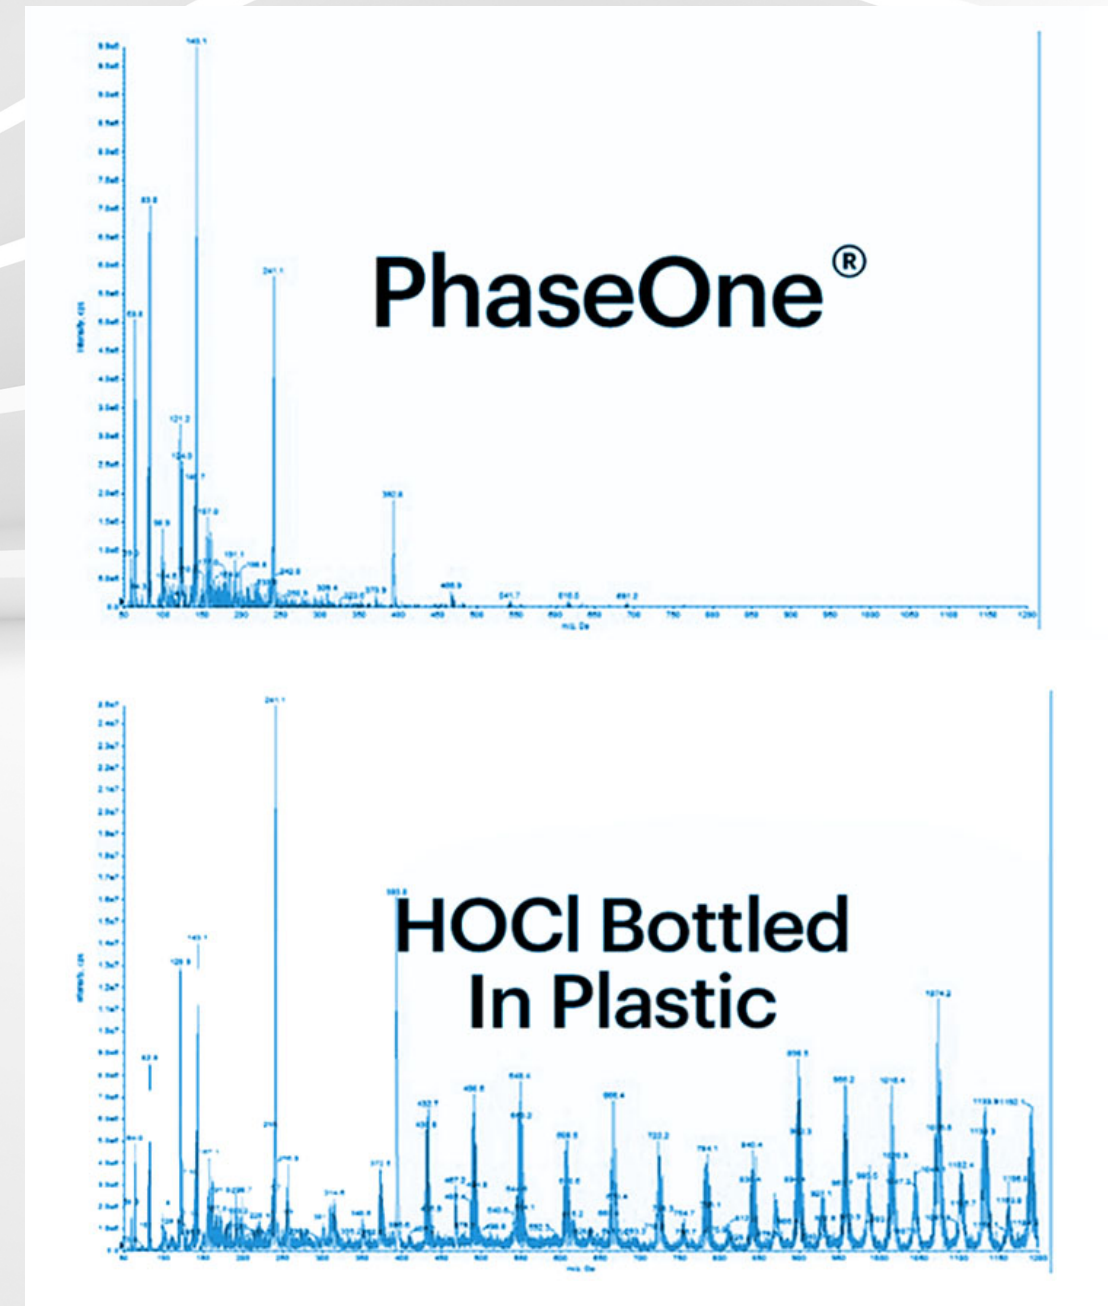

2 HIGH STABILITY & PURITY MAINTAINED BY OUR UV LIGHT BLOCKING BOTTLE

UV light can break chemical bonds in HOCl reducing efficacy. PhaseOne is bottled in Amber UV light blocking glass to safeguard against these assaults on purity². You and your patients need pure & stable HOCl to reduce microbial risk and PhaseOne delivers.

3 WHAT'S IN YOUR BOTTLE?

Plastic can leach by-products into HOCl. PhaseOne is bottled in UV blocking glass with a Teflon lined cap to ensure our HOCl remains pure. You and your patients deserve pure HOCl for maximum efficacy and positive outcomes. Our unique UV blocking glass bottle delivers time after time.
